

DHY 118: Anatomy, Embryology & Histology of the Head and Neck

This course is designed to study the composition, structure and function of the cells and tissues of the body with emphasis on the head, neck and oral cavity. Embryological development of these structures will be traced. Gross anatomy and histologic considerations provide the foundation for understanding of dental and oral disease. Upon completion, the student will be able to discuss the embryologic development, the anatomical structures, and the cells and tissues comprising anatomic structures in the head, neck, and oral cavity.

Credits: 2

Transfer Code: Code C

Lab Hours: 0

Lecture Hours: 2

Prerequisites:

Admission to the DHY Program

Program: Dental Hygiene

Semester Offered:

Fall
