

DMS 221: Obstetrical Sonography II

This course will provide instruction regarding the sonographic appearance of fetal and extra-fetal anatomy and correlate findings of fetal anomalies and genetic links. Assessment, lab values, and performance for determining gestational age and fetal viability will be studied. At completion, the student will be required to differentiate between normal and abnormal obstetrical studies. This is a CORE course for our General Track.

Credits: 3

Lab Hours: 0

Lecture Hours: 3
