

FLT 133: Meteorology

This course covers the characteristics of air masses and fronts, elements of weather forecasting, the procurement and use of aeronautical weather reports and forecasts, and the recognition of critical weather situations. Included are the causes of weather, sources for weather data, types and interpretation of weather reports and forecasts, and procedures for evaluating weather. Upon completion, students will be able to obtain available weather data and make meaningful evaluations of the best course of action based on that information. As needed.
